🌱 The Real TT Intro Session Blueprint

🔁 4-Part Flow (Know the Person)

🟣 1. Connect – "Who Are You?" (25-45 min)

Start with the heart. Let the student feel heard and human.

✅ Key Prompts:

- "What's something in life or school you're proud of this year?"
- "What's your dream life or job?"
- "What subject just *gets you*... and which one drains you?"
- "If school was a playlist, what's your skip button?"

✅ What You're Doing:

- Finding emotional drivers
- Spotting hidden confidence issues
- Beginning to build trust and rapport
- Logging student identity cues

🔍 Expanded Student Identity Prompts

🧠 Mindset & Self-Perception

- "When do you feel most like yourself?"
- "What do you wish adults & parents understood better about you?"
- "If your brain had a voice, what would it say after a bad test?"
- "What's something you believe about yourself that no one sees?"

❤️ Values & Emotional Landscape

- "What kind of person do you want to be remembered as?"

- “What’s something that makes you feel safe? What makes you feel anxious?”
- “If you had a reset button for this year, what would you change?”
- “Who’s someone in your life you deeply respect, and why?”

🛠️ Coping

- “What’s something you do that helps you feel proud or strong?”

🌍 Social & Cultural Identity

- “What do people usually get wrong about you?”
- “What does your culture, family, or background mean to you?”
- “Who do you look up to - in real life or online - and what do they teach you?”

🎨 Creativity & Imagination

- “If your life was a movie, what’s the plot right now?”
- “What kind of stories or characters speak to you most?”
- “If you could design your own subject in school, what would it be called?”

🔥 Dreams & Inner Drive

- “What’s a dream you haven’t told anyone about?”
- “What’s something you *really* want - even if it feels out of reach/impossible?”
- “If nothing could stop you, what would you be doing five years from now?”

KPI:

- Student shares personal insights
- Student feels relaxed, safe and seen by end of segment (measured by tone change or smile)

Checklist:

✅ Greeted warmly and set casual tone

✅ Asked emotional driver questions - made it a first friendly date convo, not a job interview.

✅ Logged identity cues in Student Identity Sheet

✅ Recorded all student answers in Google Docs

🔵 2. Surface the Pains – "What Feels Off?" (5–7 min)

Now it's time to address math! Before showing them problems, **ask** what never made sense.

✅ Questions (Human-Diagnostic Style):

- "Which topics in math have always felt confusing, no matter how many times they explained it?"
- "Are there moments in math where you just freeze or feel lost?"
- "Which topics do you secretly wish made more sense?"

💬 Power Line:

"If you woke up and forgot all of math, I'd still be excited to walk you through it. I don't care what you get wrong - I care about what we build together."

✅ What You're Doing:

- Letting them reveal pain points without shame
- Showing you're not here to test - they're here to be helped
- Treating them like a real **client and patient**, not just a student

KPI:

- Student names at least 2 confusing math topics without hesitation
- Student feels safe admitting academic struggles (no defensiveness)

Checklist:

✅ Asked non-judgmental questions

✅ Listened deeply without correcting

✅ Wrote down student pain points

🧠 3. Diagnose – "Why Is This Happening?" (10–15 min)

Now that you know the symptoms, you're here to **diagnose the root.**

✅ How:

- Give 1–2 quick problems based on their pain points

- Watch and listen - *don't interrupt*

🎯 Then ask yourself: Which **3-Layer Lens** layer is broken?

Layer	What to Look For
Vocabulary	They don't understand the terms ("What's a numerator again?")
Method	They try random steps or skip around
Reason	They memorize but don't know *why* it works

✅ What You're Doing:

- Identifying their **learning fracture**
- Spotting how they think, not just what they know

💬 Power Line:

"This isn't a mistake. It's a clue."

"If we fix the right layer, the whole thing starts making sense."

KPI:

- Tutor correctly identifies if fracture is Vocabulary, Method, or Reason
- Tutor can explain in 1–2 sentences why the student struggles

Checklist:

✅ Gave 1–2 sample problems based on pain points

✅ Observed problem-solving style quietly

✅ Marked which layer (Vocab, Method, Reason) needs focus

🟢 4. Anchor – "What's the Plan?" (5–7 min)

Reconnect them to **hope, strategy, and structure**.

✅ What to Do:

- Reflect their strengths: *"You think visually. You explain well. You're a builder."*
- Share your insight:

  "Your confidence breaks when the vocabulary isn't clear - so we'll start there."

- Introduce TT's tools:

- Learning ID (Lawyer; Problem-Solver/Entrepreneur; Movie Director; Doctor)
- Solutions Unlocked (lesson comprehension / successful 3 layer applications/superpowers gained)
- Boss Battle Log (Brutal problems solved)

💬 Power Line:

"We don't tutor. We train minds. And this? This is just your journey's beginning."

Say something like: "These trackers are your map. Every hero needs one. We're not just going to guess if you're improving - we'll prove it."

● Walk through how the system works

● Let them ask questions - it builds buy-in

KPI:

- Student leaves with simple, hopeful understanding of next steps
- Parent/guardian receives a 2–3 sentence professional summary

Checklist:

✅ Reflected at least 1 strength they showed

✅ Framed the first mini-goal (Boss Battle) clearly

✅ Introduced TT tracking tools softly

✅ Sent quick Parent Summary within 24 hours

✍️ Deliverables After Session:

- ✅ Student Identity Sheet
- ✅ Pain Point Map
- ✅ 3-Layer Diagnosis Notes
- ✅ Session 1 Setup: First Target Skill + Boss Battle Strategy

✅ Parent Summary: "What We Found + Where We're Going"
